

PROJECT ROOM | PUBLIC BRIEFING

UKIEE PROJECT ROOM

A dedicated business environment for authorised public-facing project introductions and direct international industry discussion.

MAGAZINE LONDON | 24-27 MAY 2027

International Energy Exhibition London 2027 | www.ukiee.com

Public information only | Direct discussion | No procurement role | No guarantee

A simple business room for publicly discussable projects

Bring the project. Explain the requirement. Meet the capability.

Governments, utilities, public authorities and project owners can introduce authorised public-facing information about existing, planned or forthcoming energy and infrastructure projects. Relevant manufacturers, EPC/EPCM contractors, engineering companies, technology providers, investors, specialist suppliers, other governments and institutions can hear the project and discuss whether further engagement is worthwhile.

PUBLIC INFORMATION ONLY

No confidential, restricted, commercially sensitive or non-public procurement information is required.

DIRECT DISCUSSION

The project owner and interested organisations speak directly in the Project Room.

NO UKIEE PROCUREMENT ROLE

UKIEE does not select, qualify, recommend or approve suppliers and does not run a tender.

NO GUARANTEE

Participation does not guarantee meetings, investment, procurement, contracts or commercial outcomes.

THE SIMPLE FOUR-STEP MODEL

UKIEE provides the room and the event environment. The parties decide whether to continue.

01 | INTRODUCE

The project owner decides what authorised public-facing information it wishes to present.

02 | HEAR

Participating organisations review or hear the public project information directly.

03 | DISCUSS

Relevant organisations ask questions and explain capability, interest or possible cooperation.

04 | CONTINUE DIRECTLY

Where there is mutual interest, the parties continue directly after or outside UKIEE.

Project owners meet international delivery capability

The Project Room is designed to support direct business discussion across the project-delivery ecosystem without turning UKIEE into a procurement intermediary.

GOVERNMENTS & PUBLIC AUTHORITIES Introduce or refer suitable publicly discussable projects and participate in the conversation.	UTILITIES & PROJECT OWNERS Explain the project purpose, context and broad requirement using information approved for public discussion.
EPC / EPCM & ENGINEERING Discuss engineering, integration, project-management and delivery capability directly with the project owner.	OEMs & MANUFACTURERS Discuss equipment, manufacturing, technology, delivery and lifecycle-support capability.
TECHNOLOGY & SPECIALISTS Explain relevant technology or specialist services where they relate to the publicly presented project.	INVESTORS & FINANCE Where relevant, discuss financing, investment or institutional cooperation directly with the project owner.
OTHER GOVERNMENTS & INSTITUTIONS Join relevant cross-border, institutional or project discussions where appropriate.	PROFESSIONAL VISITORS Hear public project introductions and understand the companies and capabilities active around them.

National procurement authorities

A national procurement authority does not need to own a project or conduct procurement activity at UKIEE. It can identify a suitable publicly discussable project or introduce UKIEE to the ministry, utility, state-owned organisation or public project owner responsible for it.

A business discussion - not a tender process

PROJECT INTRODUCTION

The project owner introduces the project, its purpose and the broad requirement using only authorised public-facing information.

QUESTIONS

Participants can ask questions about the information presented and understand the project owner's objectives and context.

CAPABILITY DISCUSSION

Relevant companies or institutions can explain how their engineering, equipment, technology, finance or services may be relevant.

DIRECT FOLLOW-UP

If the parties wish to continue, they exchange details and continue directly through their normal procedures.

PROJECT ROOM BOUNDARY

Any subsequent technical, commercial, procurement, investment or contractual process remains outside UKIEE and entirely with the relevant parties.

UKIEE may provide

Event environment

A professional Project Room within UKIEE 2027 for project introduction and discussion.

Public project presentation

A place to present information the project owner is already authorised to discuss externally.

Meeting environment

Space for participating organisations to speak directly where practical and appropriate.

Event coordination

Practical scheduling and participation information for the exhibition environment.

UKIEE does not provide

Supplier qualification, supplier recommendation, procurement advice, tender administration, bid evaluation, due diligence for a contracting authority, contract negotiation, investment decisions, contract awards or guarantees of commercial outcome.

Project owners control what is disclosed

No confidential or non-public procurement information is required. The safest Project Room submission is the same kind of information an organisation is already authorised to discuss publicly or externally.

GOOD PUBLIC INFORMATION

Project name or public description; responsible organisation; country/location; public purpose; broad project context; public source link where available; the general requirement the owner is comfortable discussing.

DO NOT SEND

Confidential tender documents; unreleased budgets; restricted engineering data; unpublished bid criteria; personal data not required for participation; security-sensitive or commercially sensitive documents.

Publication control

UKIEE publishes a Project Room project only after publication authorisation has been explicitly recorded. A Project Intelligence record sourced from public material is separate and does not mean the project owner participates in UKIEE.

PUBLIC PROJECT INTELLIGENCE IS SEPARATE

Public Energy Project Intelligence is a market-awareness research resource. A public-source listing does not imply project-owner participation, endorsement, Project Room submission or agreement to meet.

A low-burden route into the Project Room

Authorities can help without preparing a tender package or sharing project files. The request is simply to identify or refer projects that are appropriate for public business discussion.

1. IDENTIFY

Identify a publicly discussable energy or infrastructure project.

2. REFER

If another organisation owns it, introduce UKIEE to the responsible ministry, utility, authority or project owner.

3. PARTICIPATE

Attend the Project Room discussion where useful and hear relevant international capability directly.

4. CONTINUE NORMALLY

Any later procurement, qualification, investment or contracting follows the responsible organisation's own procedures.

Why this can be useful

The Project Room can place a publicly discussable project in front of a concentrated international audience of manufacturers, EPC/EPCM organisations, engineering companies, technology providers, investors, suppliers, other governments and professional institutions. The project owner can then decide for itself whether any discussion merits follow-up.

NO PROCUREMENT COMMITMENT

Participation in the Project Room does not constitute prequalification, endorsement, supplier selection, procurement, contract award or an investment commitment.

Introduce a project or join the discussion

Governments, utilities, public authorities and project owners can introduce a project using public-facing information only. Companies and institutions can participate through the appropriate UKIEE exhibiting, visiting or partnership route.
